About MECHATRONICS Systems Pvt. Ltd.

- Mechatronics, established in 1991 to provide complete solution for efficient water resource management system (IWRM) means *from first drop of rain to the end water user*. is now proudly holding CMMI 3 certification for software, ISO 27001-2013, ISO 14001-2015 and ISO9001:2015 quality certification, offering ***Truly Indigenous, 100% Made in India***, state-of-art, Smart Digital solution for integrated water resource management.

- Robust and time tested products, solutions and services has earned Mechatronics, many a laurels from customers worldwide.
- A strong team of 200 professionals comprising of software engineers, hydrologists, electronics and instrumentation engineers, business graduates, installation and commissioning engineers having interdisciplinary experience.

A STUDY ON NARAYANPUR LEFT BANK CANAL, KARNATAKA, INDIA

Introduction

- Canal automation is a combination of technical, managerial, and organizational upgrading of irrigation schemes with the objective to optimise resource utilization (water, manpower, energy etc.) and water delivery service to farms.
- Encouraged by ongoing drive of Gol for water conservation and integrated management of water, KBJNL implemented a GIS based automatic operations of the Narayanpur Left Bank Canal (NLBC) network.
- **Adequate quantity of water can be provided timely, equitably, judiciously which leads to reliability and flexibility of implemented GIS based smart irrigation system.**

Way Forward

- Waking up to Information Technology & Digital World
- Adopting ICT and Digital technologies as they have already entered every sphere of human endeavor.
- Thinking beyond Dams, Canals, Ponds, Pipes and Processes
- Thinking out of the Box and beyond the “Tried and Tested” approaches of past
- Welcoming a New approach characterized by Real Time Data Driven Decision Making and Automated Field Operations
- Adapting a New Style of Management encompassing a wide variety of Management Tools and Decision Support Systems

Water is Life, Conserve it !

Smart Applications

The Solution

To overcome the shortcomings in present WRM scenario, it becomes necessary to use ultra-modern digital technologies for real-time monitoring and control of water resources by deploying

- GIS based Enterprise Information Management will provide real-time information & data to managers,
- Smart weather, level, rainfall and flow measurement systems,
- Dam and canal automation systems,
- Judicious and equitable Water distribution through smart integrated Water Supply operations,
- IT hardware and communication devices for remote data,
- Judiciously distributing water to every farm by using the data generated by Geographical Information System (GIS),
- Soil Health surveys and associated with INMIS.
- Farmer Information Kiosk / Smart phone app

Hon'ble Prime Minister's Vision

Inspired by Hon. Prime Minister of India's dream vision of establishing farmer focused, sustainable, smart, digital, indigenous (made in India) water resource management information system.

We have developed GIS based Smart Integrated Water Resource Management & control system comprising Enterprise Management Information System (EMIS) & water SCADA provides strong base for agricultural development which in turn will boost Indian economy.

Smart Applications

Solar powered Smart gate for canal control and monitoring

- Inbuilt Flow Measurements.
- Suitable for Solar /DC/ AC power
- Minimal Power requirements
- Suitable to Retrofit on existing gate structure
- Inbuilt Gate Position sensor with digital Readout
- Limit switches (High, Low, near high, near low)
- Interface with almost all RTUs/PLC
- Push-buttons for Local operations
- RS-485, SDI-12, RS 232 Interface
- MODBUS / PROFIBUS protocols
- Suitable for Local/Remote/Automatic control.
- Flow measurement Accuracy better than +/- 2.5 %
- Programmable units of Measurements FPS / MKS
- Suitable to Integrate with SCADA network
- Level measurement using ultrasonic/Pressure type level sensor.
- Robust construction for Field Operation
- Powers-supply 12 VDC / solar power / 1 phase AC

Smart Applications

Pre-implementation Scenario

- Suffering of water scarce atchku area of 1,05,623 ha
- Poor Water Use of Efficiency of 31.75% against Design Efficiency of 51%
- Violation of rotational system / Warabandhi
- Absence of proper water regulatory system
- Inadequate manpower for canal operation
- Methodology as fixed flow structure
- Manual control of the gates
- Inaccuracies, uncertainties in measurement
- Poor emergency response
- Wastage of water
- In equitability between upstream & tail end water users
- No control on unauthorized usage of water
- Violation of cropping pattern leading to uneven crop growth and poor yields
- No accountability due to absence of water accounting & audits

Post-implementation Scenario

- **First time in the history of NLBC, water delivered to the tail end users suffering atchku area.**
- **Increased the water use efficiency** in the network due to effective water conservation practices.
- Automatic control of the canal network possible in the absence of operators.
- Water distribution done judiciously, equitably and efficiently among the farmers/stake holders
- Increased crop productivity at tail end
- Increased Irrigated area
- Online water demand, water accounting, auditing, billing & Revenue generation
- Reduce costs by eliminating paperwork and improving processes
- Optimization of water storage
- Real time remote monitoring, control & decision making
- Reduction / Elimination of man-made errors
- **The entire system is functioning successfully since inception, i.e. for last 3 years.**
